

## Roll-Out options for solar plant installations

### MYBLUEPLANET as contractor

MYBLUEPLANET handles the planning, construction, financing and operation of the solar plant, and supplies or sells the solar electricity to the school, saving time and money.

### School/local authority

The school/local authority finances and manages the solar plant installation (with or without a public tender) using its own funds and personnel, or commissions MYBLUEPLANET as general planner.

### Local or regional association/cooperative

Solar plants are financed by an existing or newly-created association. The association may also be supported by the local community.

### Local electricity supplier

Local energy companies support the school/local authority in financing and planning the solar plant installation.
